SUMMARY

Detail-oriented professional with 5 years of experience seeking a Software Developer role, offering strong foundations in JavaScript, React, Python, Node.js, SQL, PostgreSQL, RESTful APIs, Docker, and Git. Background in high-volume data accuracy, database-driven workflows, debugging, technical documentation, and performance monitoring. Brings remote collaboration, Excel-based reporting, and secure documentation discipline transferable to software development.

WORK EXPERIENCE

- | | |
|---|--|
| Keen (Ingenio LLC)
<i>Remote Client Advisor</i> | Remote / Virtual
Nov 2021 - Present |
| <ul style="list-style-type: none">• Manage high-volume, data-driven client consultations independently in a remote environment while navigating multiple internal tracking systems under strict deadlines.• Maintain 99.8% accuracy in documentation and transaction logging across thousands of secure customer file configurations.• Use Microsoft Outlook and secure communication tools to support effective asynchronous collaboration and ensure alignment with project requirements. | |
| The Home Depot
<i>Data Entry & Inventory Representative</i> | Clarksville, TN
Jun 2019 - Aug 2019 |
| <ul style="list-style-type: none">• Audited and processed high-volume digital inventory records, identifying data discrepancies, missing SKUs, and formatting errors to support inventory accuracy.• Used advanced keyboard shortcuts and internal database systems to improve the efficiency of daily material data cleansing and record processing.• Compiled daily operational productivity logs for leadership using Microsoft Excel sorting and filtering functions to support reporting and workflow oversight. | |

SKILLS

JavaScript (ES6+) • HTML5 • CSS3 • React • DOM Manipulation • Component-Based UI Design • Flexbox • CSS Grid • Python • FastAPI • Node.js • SQL • PostgreSQL • SQLAlchemy ORM • Database Integration • RESTful API Building • JSON Data Parsing • Async/Await Fetch Polling • System Latency Performance Monitoring • Docker Engine • Docker Compose Containerization • Git Workflows • GitHub Pages Deployment • VS Code • Nginx Web Servers • Agile Process Frameworks • Code Refactoring • Debugging • Automated Testing • Technical Documentation • Microsoft Outlook • Microsoft Excel • Java • JavaScript • Git • Problem-Solving • Communication • Teamwork • Time Management

SELECTED SOFTWARE ENGINEERING PORTFOLIO PROJECTS

Retail Supply Chain & System Resilience Monitor- *, GitHub*

- Technologies: Python, SQL, JavaScript, Docker. Repository: github.com/BrittanyNation/retail-supply-chain-monitor. Designed a multi-container full-stack retail dashboard utilizing Docker Compose to link a Python API node, a PostgreSQL database layer, and an Nginx container over a unified local network bridge. Engineered a FastAPI (Python) REST backend that queries a relational SQL ledger to calculate store stock parameters and dynamically output real-time SKU threshold alerts. Constructed system resilience telemetry scripts calculating live API latency execution speeds in milliseconds and logging database node failover states. Developed a semantic frontend dashboard using vanilla JavaScript to poll backend metrics asynchronously every 5 seconds and render conditional visual warnings.

Sovereign Project Invoice & Contract Generator, GitHub

- Technologies: Vanilla JavaScript, HTML5, CSS3. Repository: github.com/BrittanyNation/sovereign-invoice-generator. Built a highly functional frontend utility application utilizing object-oriented JavaScript to handle dynamic milestone data arrays and calculation engines. Implemented persistent client-side data tracking using browser localStorage nodes to cache and preserve form states during session refreshes. Optimized application layouts using specialized @media print CSS overrides to cleanly strip the UI sidebar controls and format transaction data for clean "Save to PDF" execution.

Real-Time DevOps Deployment Monitor Dashboard- *, GitHub*

- Technologies: JavaScript, HTML, CSS, Spring Boot. Repository: github.com/BrittanyNation/devops-monitor-dashboard. Created an interactive frontend systems console using the browser's Fetch API to poll microservices clusters and visualize database topology mapping.
