---

## SUMMARY

Detail-oriented professional with 5 years of experience seeking a Software Developer role, offering strong foundations in JavaScript, React, Python, Node.js, SQL, PostgreSQL, RESTful APIs, Docker, and Git. Background in high-volume data accuracy, database-driven workflows, debugging, technical documentation, and performance monitoring. Brings remote collaboration, Excel-based reporting, and secure documentation discipline transferable to software development.

| SELECTED SOFTWARE<br>ENGINEERING<br>PORTFOLIO PROJECTS | <div> <div> <i>Retail Supply Chain &amp; System Resilience Monitor-</i><br/> , GitHub </div> <ul style="list-style-type: none"> <li>Technologies: Python, SQL, JavaScript, Docker. Repository: <a href="https://github.com/BrittanyNation/retail-supply-chain-monitor">github.com/BrittanyNation/retail-supply-chain-monitor</a>. Designed a multi-container full-stack retail dashboard utilizing Docker Compose to link a Python API node, a PostgreSQL database layer, and an Nginx container over a unified local network bridge. Engineered a FastAPI (Python) REST backend that queries a relational SQL ledger to calculate store stock parameters and dynamically output real-time SKU threshold alerts. Constructed system resilience telemetry scripts calculating live API latency execution speeds in milliseconds and logging database node failover states. Developed a semantic frontend dashboard using vanilla JavaScript to poll backend metrics asynchronously every 5 seconds and render conditional visual warnings.</li> </ul> <div> <i>Sovereign Project Invoice &amp; Contract Generator</i>, GitHub </div> <ul style="list-style-type: none"> <li>Technologies: Vanilla JavaScript, HTML5, CSS3. Repository: <a href="https://github.com/BrittanyNation/sovereign-invoice-generator">github.com/BrittanyNation/sovereign-invoice-generator</a>. Built a highly functional frontend utility application utilizing object-oriented JavaScript to handle dynamic milestone data arrays and calculation engines. Implemented persistent client-side data tracking using browser localStorage nodes to cache and preserve form states during session refreshes. Optimized application layouts using specialized @media print CSS overrides to cleanly strip the UI sidebar controls and format transaction data for clean "Save to PDF" execution.</li> </ul> <div> <i>Real-Time DevOps Deployment Monitor Dashboard-</i><br/> , GitHub </div> <ul style="list-style-type: none"> <li>Technologies: JavaScript, HTML, CSS, Spring Boot. Repository: <a href="https://github.com/BrittanyNation/devops-monitor-dashboard">github.com/BrittanyNation/devops-monitor-dashboard</a>. Created an interactive frontend systems console using the browser's Fetch API to poll microservices clusters and visualize database topology mapping.</li> </ul> </div> |
